QuantNifty

ALGORITHMIC TRADING SYSTEMS · BUILT TO SPEC

Your capital works once. We make it work twice.

A long-term portfolio is productive and idle at the same time. The stock compounds. The margin locked behind it just sits there. We build the second engine that runs on that margin.

NIFTY & SENSEX INDEX OPTIONS

SHARPE 6.28

QUANTNIFTY.COM

THE IDEA IN ONE PICTURE

Nobody buys a flat and leaves it empty.

Buy an investment property and you do two things with it. You let it appreciate, and you rent it out. One asset, two income streams. Everybody understands this.

PROPERTY, ₹1 CRORE

Appreciates and earns rent

Capital appreciation	yes
Rental income	yes

PORTFOLIO, ₹1 CRORE

Appreciates. Earns nothing else.

Capital appreciation	yes
Income from the interest-free margin behind it	nothing

Pledging your holdings is the equivalent of renting out the flat. You still own it. It still appreciates. It now also produces income.

HOW IT WORKS

The Double Engine

Your shares earn the market's return. The margin locked behind those shares earns nothing until you put a second engine on it. Same capital, nothing sold, two returns instead of one.

01 YOU HOLD

The stocks work

₹1 crore in NIFTYBEES earns whatever the index earns. Historically about 12% a year.

02 YOU PLEDGE

The margin unlocks

Your broker releases trading margin against those holdings. Nothing sold, nothing borrowed, no interest to pay.

03 WE DEPLOY

The second engine runs

That idle margin funds systematic option strategies on NIFTY and SENSEX. Its return stacks on top of the first.

SAME ₹1 CRORE · APEX ENGINE

Engine one · NIFTYBEES	12.0%	₹12.00 L
Engine two · on pledged margin	41.0%	₹41.00 L

COMBINED

53.0%

₹53,00,000 a year

The equity leg assumes a 12% long-run NIFTY CAGR, which is indicative rather than guaranteed. Pledging applies a haircut, so ₹1 crore of holdings usually releases around ₹75 to 85 lakh of usable margin. Size the engine to the margin actually released.

OUR PROPRIETARY ALGORITHMS

Three engines, one risk line.

Written from scratch and traded with our own money. Each runs a basket of independent strategy sleeves rather than one setup. The sleeves disagree with each other by design, and that disagreement is what flattens the curve.

LONGEST RECORD

Apex

NIFTY · 0-1 DTE

41.0%

per year, backtested

Max drawdown	-4.95%
Sharpe ratio	4.67

HIGHEST RETURN

Alpha

NIFTY + SENSEX · 0-1 DTE

75.4%

per year, backtested

Max drawdown	-4.40%
Sharpe ratio	6.28

RISK FIRST

Whale

DRAWDOWN-CAPPED

25.7%

per year, backtested

Max drawdown	-1.50%
Sharpe ratio	6.28

A Sharpe above 2 is excellent. Above 3 is rare.

Whale is the same signals as Alpha, hedged the same way, then sized down until the drawdown fits your mandate.

Figures are backtested on ₹1 crore of deployed margin, net of 0.2% slippage per fill, hedge cost and all statutory charges. Not a live track record. QuantNifty is not a SEBI-registered Research Analyst or Investment Adviser.

THE SAME ₹1 CRORE, ONE YEAR

What your capital is allowed to earn.

WHERE IT SITS	RETURN	SHARPE
Bank fixed deposit	7.0%	0.3
NIFTY 50, buy and hold	12.0%	0.6
NIFTY + Whale	37.7%	6.28
NIFTY + Apex	53.0%	4.67
NIFTY + Alpha	87.4%	6.28

₹75.4 L

Extra income a year, on capital you already own

₹0

Additional capital required. Nothing sold, nothing borrowed

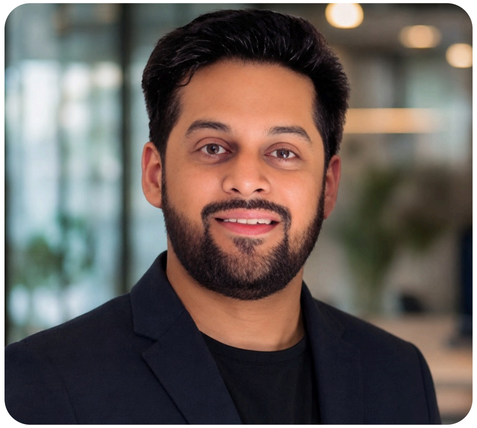
12.5×

The return of a fixed deposit, at a Sharpe an FD cannot reach

Figures are backtested on ₹1 crore of deployed margin, net of 0.2% slippage per fill, hedge cost and all statutory charges. Not a live track record. QuantNifty is not a SEBI-registered Research Analyst or Investment Adviser.

WHO BUILDS THIS, AND HOW

The engineer and the trader are one person.



Anuj Baid

FOUNDER · QUANTNIFTY

Seasoned algorithmic trader across Indian index options and US markets. Software engineer, which is why the systems get written here instead of outsourced.

NIFTY & SENSEX | SPX 0-DTE | MNQ FUTURES

AI does the searching. Rules do the trading.

Every engine survived a machine that spent weeks trying to break it. Millions of versions get built, tested against years of real market data, and thrown away.

3,200,000
VERSIONS GENERATED

20,000
STILL WORKED ON UNSEEN DATA

IS → OOS testing

Test three million settings and one looks brilliant by chance. So nothing ships until it still works on data it has never seen.

Honest costs

Slippage on both sides of every fill, the hedge, and full statutory charges. We kill more ideas than we ship.

QuantNifty

LET'S TALK

Tell us the drawdown you can live with. We size the rest.

Most systems hand you a return and leave the risk wherever it lands. We work the other way round. You name the deepest drawdown you are willing to sit through, and the position sizing is solved backwards from that. Custom low-risk mandates are exactly what we build.
